

김현영 (Kim Hyeon Yeong)

- About Me

I am a student in my 3rd year majoring in Artificial Intelligence Engineering at the School of AI & Software, Chosun University. I have a keen interest in Deep Learning and Edge AI technologies. Currently, I am conducting research on automated data refinement and unsupervised object detection. My ultimate career goal is to become an On-device AI Developer, and I am actively enhancing my expertise in Deep Learning, Python, NLP, and Computer Vision.

- Education

Chosun University

- Department of Artificial Intelligence Engineering
- Year: 3rd year
- Relevant Coursework: Machine Learning, Deep Learning, Web Programming

- Skills

Programming

- Python - Intermediate
- JavaScript - Basic
- C/C++ - Basic

AL / ML

- PyTorch - Basic
- TensorFlow - Basic
- scikit-learn - Basic

Web/Tools

- HTML/CSS - Basic
- React - Basic
- Git/GitHub - Basic

Database

- MySQL - Basic
- SQLite - Basic

- Projects

Efficiency Optimization & Object Detection Study

- Research on automated data refinement and unsupervised object detection efficiency for low-specification environments. Focused on training data refinement models and real-time inference algorithms.

DACON AI Competition

- Gained hands-on experience in data preprocessing, model training, and performance evaluation through the DACON AI Competition, with plans for continuous participation in future competitions.

- Experience

- Efficiency Optimization & Object Detection Study
- DACON AI Competition Participant
- Deep Learning Team Project

- Career Goal

- Graduate School in Artificial Intelligence
- On-device AI Developer
- AI Researcher
